RES in Scotland

RES is a privately-owned company with a proud history in Scotland.

From our Glasgow office we have been developing, constructing and operating energy projects since 1993. This includes the development, construction, and asset management of Scotland's first utility-scale battery storage facility, the Broxburn Energy Storage facility in Broxburn, West Lothian.

RES is the power behind a clean energy future where everyone has access to affordable zero carbon energy bringing together global experience, passion, and the innovation of its people to transform the way energy is generated, stored and supplied.

By listening, discussing, and working together, we can build clean energy project proposals that power positive change for everyone.

RES has been working in the battery energy storage market for a decade and design safe storage projects using proven Lithium iron phosphate technology. Across the UK and Ireland, RES has developed over 830MW of battery energy storage projects, and we currently manage over 600MW of operational storage projects with 24/7/365 monitoring provided from our control centre in Glasgow.
